Biography and Research Interests

My research interests lie in the intersection areas of software engineering and large language models to steer future-oriented AI-centered autonomous software development and maintenance. I'm also interested in exploring relevant techniques to develop AI-tutoring systems to ease the teaching workload for computer science education. My research on autonomous software development has attracted public interest (>1 million views on Twitter, >2.1k stars, and daily/weekly trending on GitHub), and the AI-tutoring system has been deployed in NUS and adopted by other universities for teaching propose.
